DENTSPLY

Most important requirements of an Endo-Sealer

1 Tight sealing

> Dimensional stability

(low shrinkage, low leakage)

> Self-adhesive properties

2 Biocompatibility

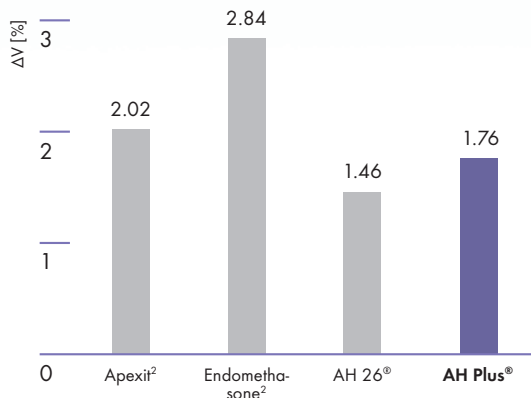

3 Radiopacity

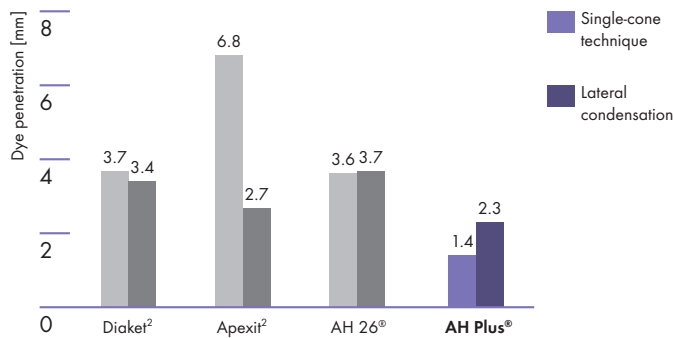

Proof that AH Plus® provides a superior endo seal

1

Excellent Low Shrinkage¹

Outstanding Low Leakage

Al-Khatir N, Kunzelmann K-H, Hickel R, Apical leakage of new root canal sealers. J. Dent. Res. 74 (3), 1995, 945, Abstract #273

Extraordinarily High Adhesion to Dentine in Root Canals

Souza SFC, Bombana AC, Francci C, Gonçalves F, Castellán C, Braga RR. Polymerization stress, flow and dentine bond strength of two resin-based root canal sealers. Int. Endod. J. 2009 Oct;42(10):867-73.

2

Biologically Inert

"In general, epoxy-based sealers do not cause irritating effects towards periapical tissues."

"Once set, epoxy resins can be considered as biologically inert."*

Anti-microbial

"AH Plus exhibits moderate anti-microbial properties and therefore has the potential to reduce the germ load in the canal significantly."*
